

Learning & Productivity SaaS Platform Proposal

Project Overview

This project is a full-stack Learning Management System (LMS) combined with productivity tools. It allows instructors to create and sell courses, while students can enroll, learn, and track their progress.

Core Features

User Authentication (JWT based) Instructor Dashboard Course Creation & Management Video Lessons & Media Uploads Free & Paid Courses Student Enrollment System Reviews & Ratings Task & Practice System

User Roles

Instructor: Can create courses, upload videos, set pricing. Student: Can browse, enroll, learn, and review courses.

Technology Stack

Frontend: Next.js Backend: Django + DRF Database: PostgreSQL Media Storage: Cloudinary
Optional: Redis for caching

System Architecture

Next.js frontend communicates with Django REST API, which connects to PostgreSQL database and Cloudinary for media handling.

Database Design

Key models include User, Course, Section, Lesson, Enrollment, and Review with proper relational mapping.

Advanced Features

Progress tracking Analytics dashboard Notifications Subscription system Dark mode

Deployment Plan

Frontend deployed on Vercel Backend on Render/Railway Database managed PostgreSQL

Conclusion

This project demonstrates full-stack development skills and production-level system design suitable for real-world applications.
